

ХЭШ-СУММЫ К ОРИГИНАЛЬНЫМ ВИДЕО И АУДИО МАТЕРИАЛАМ

Страница содержит **хэш-суммы** к оригинальным видео и аудио материалам, имеющим отношение к Николаю Викторовичу Левашову.

Эти материалы были выложены, в разное время, на сайте автора, но часть из них уже недоступна. Поэтому, все оригинальные видео и аудио материалы, выложенные когда-то на авторском сайте, теперь можно скачать с зеркала на 2012 год.

Также, приведены хэш-суммы на более качественные DVD видеозаписи, которые распространялись внутри Движения.

Цель этого сборника хэш-сумм, учитывая постоянный рост качества «дипфейков» - при изучении каких-то неизвестных материалов о Левашове дать возможность опереться на заведомо оригинальный материал, убедиться в оригинальности которого, в свою очередь, и помогут хэш-суммы.

ПРИМЕЧАНИЯ:

- **Распространение метаданных о материалах не является распространением самих материалов, в том числе тех, которые временно признаны экстремистскими;**
- Оригинальность видеофайлов оздоровительных сеансов, подтверждённых хэш-суммами, говорит только об оригинальности конкретного **видео-файла**, но **НЕ** говорит о том, что к данному файлу «прикреплена» действующая оздоровительная программа;
- Имена файлов не имеют принципиального значения - при изменении имени файла его хэш-сумма не меняется. Имена файлов даны здесь такими, какими они были изначально на официальном сайте - даны только для удобства в ориентировании при сравнении хэшей;
- Выводимый в свойствах файла размер этого файла в разных ОС и в разных программах может быть показан с разным допуском. Поэтому, имеет смысл опираться на точный размер файла в байтах;
- При проверке материалов на оригинальность недостаточно опираться на размер файла - обязательна проверка хэшей;
- Даты создания/изменения файлов могут не соответствовать оригинальным, после того, как эти материалы распакованы из архива;
- Хэши архивов (.zip) не приводятся - только хэши конкретных материалов;
- При проверке материалов на оригинальность нежелательно опираться на устаревшие алгоритмы хэширования. Лучше использовать разные или все вместе;

- *Разнообразие в алгоритмах хэширования необходимо для усложнения возможной подмены материала и для универсальности - обеспечения совместимости со старым программным обеспечением и оборудованием старых моделей.*
